Quick Details:

ULTRA DEEP POUR EPOXY CASTING RESIN is a 100% reactive slow-setting epoxy casting system with very low viscosity and high ultraviolet resistance. The DEEP POUR makes it possible to cast river tables, from 60-100 liters, between 2" and 2.5" thick, in a single pour depending on the form and mass while maintaining its transparency and high precision. Its long pot life makes it possible to mix several liters at a time and to pour a large quantity of resin during the production of the river table. We recommend using the Casting Epoxy DEEP POUR for projects between 12-24 inches wide between 2-2.5" thick at 20-22C (70-72F).

Features:

1. No VOC's and Low Odor
2. Low Viscosity
3. U.V. Resistant & Non-Yellowing
4. Self Leveling Formula
5. High Gloss Durable Finish
6. Heat and Impact Resistance

Advantages:

The Deep Pour Epoxy lends itself perfectly to river tables and projects that require a depth of pour up to 50mm in one go. Adding pigments can create stunning creative looks and elevate your project to a stunning work of art. Optically clear with good UV resistance and very low exotherm. Pour up to 50mm in depth in one pour. Use multiple pours to build up higher depth. Due to the low exotherm you are able to pour up to 50mm with confidence. This low viscosity epoxy resin mixture leaves no hole, crack or opening unattended. The slow curing epoxy emits little to no heat and hardens to a durable and solid finish.
