Quick Details:

Casting epoxy resin is a high-quality epoxy casting resin for very transparent castings. Great ability to pour large castings, perfect air bubbles release, very smooth curing and crystal clear transparency – it is an excellent resin for casting epoxy river tables and tabletops.

The epoxy casting resin is ideal for casting objects such as figures, stones, different fragile objects or simply coating photos. This resin can be very successfully used for casting thick layers on tabletops, kitchen tops etc.

Due to its slow hardener and long curing time, any bubbles have the opportunity to escape. You have also time to make modifications to your project if needed.

Features:

1. No VOC's and Low Odor
2. Low Viscosity
3. U.V. Resistant & Non-Yellowing
4. Self Leveling Formula
5. High Gloss Durable Finish
6. Heat and Impact Resistance

Advantages:

The Deep Pour Epoxy lends itself perfectly to river tables and projects that require a depth of pour up to 50mm in one go. Adding pigments can create stunning creative looks and elevate your project to a stunning work of art. Optically clear with good UV resistance and very low exotherm. Pour up to 50mm in depth in one pour.

Use multiple pours to build up higher depth. Due to the low exotherm you are able to pour up to 50mm with confidence. This low viscosity epoxy resin mixture leaves no hole, crack or opening unattended. The slow curing epoxy emits little to no heat and hardens to a durable and solid finish.
