Designed to give a hard-wearing glossy coating over new or previously painted surfaces.

Is based on alkali resistant pigments and binder.

Is hard-wearing and easy to clean.

Is easy to repaint at any stage of life when re-coating becomes necessary.

Prevent disintegration of cement based floors.

#### Features:

1. Respectable odor
2. Superior chemical resistance
3. Durability
4. Light stable and gloss retention
5. Fast application
6. UV stability

#### Advantages:

PU flooring is known to have high resistance to natural chemicals, lactic acids, for instance. This property is what makes PU flooring the best option in the food processing industry because it food grade flooring. However, epoxy flooring does not have resistance towards lactic acids, and it will experience a degree of corrosion and yellowing when coming in contact. Unlike epoxy flooring, polyurethane is known to have higher UV stability. This means the flooring won't turn yellow when exposed to ultraviolet light or sunlight. This gives benefits to users since PU flooring is typically low maintenance once installed.
