Product Description

Two Component Deep Pour Epoxy Resin Heat And Chemical Resistance

Quick Details Of Deep Pour Epoxy Resin:

Epoxy resin is a two component synthetic resin that can be used for various purposes. Epoxy resin is produced by mixing two components that match each other. When liquid resin is mixed with a suitable hardener, a chemical reaction occurs. During processing, the resin is first liquid, then becomes gel, and then hardens. Depending on the resin system, this reaction requires a shorter or longer time, which has advantages in possible applications. The excellent properties of epoxy resin include good adhesion to almost all substrates, heat and chemical resistance, low moisture absorption, good corrosion resistance, and excellent electrical performance in the insulation field.

Features Of Deep Pour Epoxy Resin:

1. Low viscosity resin crystal clear
2. Good chemical resistance
3. Excellent defoaming formula
4. Highest yellowing resistance
5. Self-leveling & high gloss
6. Ideal for all casting and art projects
