Product Description

Wood Cast Deep Pour Epoxy Resin 50mm Thick Low Heat Release

Quick Details Of Deep Pour Epoxy Resin:

Deep Pour epoxy is a deep cast and crystal clear epoxy resin designed specifically for wood deep casting and other applications. When the room temperature is 25 °C or below, it is suitable for pouring layers with a maximum thickness of 50mm. Epoxy resin deep casting system allows for a large amount of pouring in a low heat release (heating) manner, with a thickness of 50mm-100mm per pouring, allowing you to experience the resin in a brand new way. If resin poured in a small volume or 10 millimeters or less, it may take a long time to cure and/or fail to cure to its expected performance.

Features Of Deep Pour Epoxy Resin:

1. Glass-like finish, thick pours
2. Reduce exotherm (heat build-up)
3. Excellent defoaming formula
4. Highest yellowing resistance
5. Self-leveling & high gloss
6. Ideal for all casting and art projects

Advantages Of Deep Pour Epoxy Resin:

Deep Pour epoxy is a two part, crystal clear deep casting resin that is design for projects that require pouring thickness exceeding 2 ". Its convenient formula requires a 2:1 ratio, which will result in stunning projects with glass like finishes. You can even pour multiple thick layers with a depth over 2 inches. Customize your crafts with vibrant colors, such as glitter, mica powder, liquid dye and more! Deep Pour epoxy resin is perfect for a variety of unique projects, from river tables, live edge tables, furniture making, flower encapsulations and embedding, service trays, and so much more!
