- Highlight: **Low Exothermic Deep Pour Epoxy Resin,
Table Casting Deep Pour Epoxy Resin**

Product Description

Low Exothermic Deep Pour Epoxy Resin River Table Casting Woodworking

Quick Details Of Deep Pour Epoxy Resin:

Our deep poured epoxy resin is a transparent epoxy resin typically used for thicker applications such as river table casting, creative table making, wood planking, woodworking, deep encapsulation, and casting. This epoxy resin is crystal clear after curing. This product is a 2:1 mixture. Each pour can be poured up to 2 "deep. Complete curing usually takes 24-48 hours (depending on temperature). The formulation of this 2:1 mixing ratio product is to reduce exothermic (heat accumulation), allowing users to pour thicker parts without delaying layering like standard epoxy resins.

Features Of Deep Pour Epoxy Resin:

1. Use for or river tables, resin blanks
2. Low viscosity for easy mixing
3. Excellent defoaming formula
4. Highest yellowing resistance
5. Self-leveling & high gloss
6. Ideal for all casting and art projects

Advantages Of Deep Pour Epoxy Resin:

Deep Pour epoxy is a two part, crystal clear deep casting resin that is design for projects that require pouring thickness exceeding 2 ". Its convenient formula requires a 2:1 ratio, which will result in stunning projects with glass like finishes. You can even pour multiple thick layers with a depth over 2 inches. Customize your crafts with vibrant colors, such as glitter, mica powder, liquid dye and more! Deep Pour epoxy resin is perfect for a variety of unique projects, from river tables, live edge tables, furniture making, flower encapsulations and embedding, service trays, and so much more!
